

# SCHÜTZ UK INVESTS IN HIGH-TECH IBC PRODUCTION PLANT

State-of-the-art assembly line increases flexibility, reliability of supply and processing quality

In Worksop, a SCHÜTZ location in the United Kingdom since 1992, we have made an extensive investment in the IBC assembly line: the level of automation, production level, and energy efficiency have been significantly increased

**Delivery reliability is thus once again significantly increased – even in the event of large fluctuations in demand.**

again, and the entire facility has been brought up to the very latest technical level. In combination with the existing Reco line, these extensive upgrades ensure a further increase in our capacities, accompanied by an even more precise processing quality and shorter lead times. This expansion ensures the continuous supply of our numerous customers in the UK. Delivery reliability is thus once again significantly increased – even in the event of large fluctuations in demand. At the same time, we offer our customers even more reliability and flexibility in planning their own operational processes. The new plant has already started serial production.

The new assembly line is a further component of the long-term investment programme at the SCHÜTZ location in Worksop. In the wake of this, the latest blow moulding equipment and a state-of-the-art warehouse have already been implemented in recent years to improve the distribution of goods. At the same time,

it is a renewed commitment to our involvement in the UK and neighbouring countries: SCHÜTZ has also been represented in Ireland since 2000 with a production facility that also manufactures IBCs and PE drums.
