

**PRESS RELEASE** / 01 August 2022

## **Expect more: Schütz presents new packaging solutions at Fachpack 2022**

*At this year's Fachpack in Nuremberg from 27 - 29 September, Schütz will be presenting pioneering new products for the packaging industry. The focus at the company's booth 6-237 in Hall 6 is on resource conservation, efficiency and safety. Under the motto "Expect more", visitors are invited to discover the eco-friendly Green Layer product series and the advantages of the Ecobulk MX 560 for smaller filling quantities. In addition, Schütz will be presenting the Ecobulk SX-D, the first combination IBC with FM Global approval.*

It can be difficult to find effective packaging for hazardous goods such as flammable or highly combustible liquids. Schütz has developed the new Ecobulk SX-D for this specific application and other demanding requirements. The IBC has already received the quality seal of the FM Global Group, underscoring its performance as safe packaging for sensitive goods. Thanks to its special design and features, the Ecobulk SX-D meets the highest safety standards. For example, it has a closed, fire-resistant hull in addition to the classic steel grid. This hull is welded to the integrated bottom plate, forming a separate sealed containment basin around the inner bottle of the container. The double-wall construction provides effective additional protection against leakage and stops sensitive liquids from escaping, even in extreme situations, for example in the event of a fire with very high temperatures.

### **A flexible solution for smaller filling quantities**

As a further highlight, Schütz will be presenting the Ecobulk MX 560, a real multi-talent for smaller filling volumes. The IBC has a nominal volume of 560 litres and was developed on the basis of the globally successful 1,200 x 1,000 mm pallet. The compact dimensions of the container mean that storage and transport space can be optimally utilised. The Ecobulk MX 560 is the ideal solution for mixed loads, as the IBC is fully compatible with all other MX IBC variants from Schütz thanks to its pallet size. Its low tare weight makes it easy to handle in daily use. If required, the Ecobulk MX 560 can also be equipped with an EVOH permeation barrier, which protects the filling product from changes and the environment from pollution.

### Conserve resources with the Green Layer series

In addition, Schütz will be showcasing the IBCs and drums in the Green Layer series. These products help the packaging expert's customers to minimise their CO<sub>2</sub> footprint and thus make an important contribution to achieving global and corporate climate targets. In the series, Schütz employs state-of-the-art 3- or 6-layer extrusion blow moulding lines and uses 30% high-quality, natural-coloured recycled material to make the IBC inner bottles and drum bodies. The recyclate is exclusively used for the middle layer so that the filling product and the surroundings of the packaging only come into direct contact with virgin material.

Further information on Schütz's new products will be available from 27 to 29 September at booth 6-237 in Hall 6 at Fachpack in Nuremberg. All products will be exhibited and demonstrated at the booth.

## About SCHÜTZ

Schütz is one of the leading manufacturers of high quality transport packaging (intermediate bulk container, plastic and steel drums), headquartered in Selters, Germany. Established in 1958, Schütz today has over 54 production and service locations worldwide with currently more than 7000 employees. With its four business areas Energy Systems, Packaging Systems, Industrial Services and Composites, Schütz holds various top positions in the respective markets. The total turnover in 2021 was 2.5 billion euros. The company offers its customers complete system solutions – individually tailored to the relevant supply chain. As part of a closed loop system, the Schütz Ticket Service takes over the quick collection and reconditioning of empty IBCs in all important industrial nations of the world, in line with the sustainability philosophy of the group of companies.
