

PRESS RELEASE / 22 September 2025

3-skid steel pallet from Schütz: safe transport in automated warehouses

With its 3-skid steel pallet, Schütz is presenting a solution at FACHPACK in Nuremberg from 23 to 25 September that stands out thanks to its optimal conveyor properties. With its special geometry, it is significantly superior to classic steel skid pallets and ensures safe transport even for the heaviest, high-density loads.

Under the motto 'Circular by Design', Schütz will be presenting packaging that contributes to safety, cost-effectiveness, and sustainability thanks to its well-conceived design. The company is thus emphasising its role as an application-oriented problem-solver and invites trade visitors to learn about the latest developments first-hand. One example of the consistent further development of packaging systems at Schütz is its 3-skid steel pallet. Developed for use in modern logistics and production centres, it enables a smooth flow of materials. With its even, large contact surfaces, the pallet offers excellent sliding properties on roller conveyors.

The significantly wider side skids and the new additional centre skid offer a decisive advantage over the conventional steel pallet: together, they increase the surface contact by around 900 per cent. This significantly reduces the ground pressure per square centimetre and ensures optimum load distribution. The embossed steel skids with ribbed design also provide a particularly high degree of resistance to deformation. This means that even the heaviest loads and high-density goods can be moved safely and reliably.

The 3-skid steel pallet impresses with its minimal deflection, even when fully loaded. At the same time, its universal accessibility with forklift trucks and hand pallet trucks enables convenient handling inside the warehouse. The lowered threshold facilitates lateral entry, while the nesting properties of the pallets allows space-saving stacking. With these features, the 3-skid steel pallet not only meets the highest requirements for stability and safety. Like all Schütz packaging solutions, it is also designed for a long service life and reusability, making it a clear alternative to conventional pallets in both economic and ecological terms.

Interested visitors are invited to experience the 3-skid steel pallet and other new products from Schütz live at Stand 6-328 at FACHPACK.

About Schütz:

Schütz GmbH & Co. KGaA is a leading international producer of high-quality industrial packaging (Intermediate Bulk Containers, PE and steel drums, and jerrycans). The Group's headquarters are in Selters, Germany. Founded in 1958, SCHÜTZ employs over 7000 people at more than 70 production and service sites around the world. The four SCHÜTZ business units, PACKAGING SYSTEMS, ENERGY SYSTEMS, INDUSTRIAL SERVICES and COMPOSITES, each hold leading positions in their respective markets. The Group's turnover in 2024 was 2.5 billion euros. The company provides its customers a fully circular product and service offering. In line with its sustainability philosophy, the SCHÜTZ TICKET SERVICE operates within a closed-loop system, ensuring the seamless collection and reconditioning of emptied industrial packaging in all of the world's industrial nations.
